Installation Instructions

Street Light Bar

Models 110010, 110020, 110030, 110040, 110050,
110060, 120010 and 140010

Light Bar Instructions

Models 110010, 110020, 110030, 110040, 110050, 110060, 120010 and 140010

Hardware Kit Contains:

- 2) 3/8" x 1" Hex Head Bolts
- 2) 3/8" Washers

Recommended Tools:

- 9/16" Socket Wrench
- Black Marker
- Drill and 1/2" drill bit
- Metal punch and Hammer

Step 1: Hold the Light Bar up to the face of the bumper where the round mounting brackets are flat against the bumper.

Step 2: While the Light bar is positioned on the bumper, mark around the two mounting brackets onto the bumper. Next, remove the light bar and set aside. You should have two circular marks on the bumper.

Step 3: Mark a 'X' through each circle, this will give you the center. Use a metal punch and hammer to punch a pilot hole through the center of the circle.

Step 4: Drill a 1/2" hole through the pilot marks. **NOTE:** Make sure the holes are free of metal burrs.

Step 5: Align the Light Bar mounts to the drilled holes and place a 3/8"x 1" bolt and the 3/8" washer through the back side of the bumper and thread into the light bar bracket. After final positioning, torque each bolt location to 15-20 ft/lbs. **NOTE:** Removing the bumper may be easier on some models.

Model 110020 and 110030

Step 1: Drill out the two square license plate holes with a 1/2" drill bit.

Step 2: Perform step 5 above. **NOTE:** Mount the license plate back behind the Light Bar bracket.
