## NEWS

Class SB5 | Issue 5 | July 2007 | Product Highlight: XRC Front Bumper | www.smittybilt.com

### NEW PRODUCT

The new XRC Bumper line was engineered to provide maximum clearance for rock crawling. Each bumper has high degree approach angles and raised corners to maximize ground clearance. Each bumper is manufactured from 3/16" cold rolled steel and then robotically welded to the exact specifications. All the welds are ground down and smoothed out and then a two stage powder coat is applied for the ultimate look. The textured matte powder coat finish offers a truly custom look! The front stinger is manufactured from 1.75 tubing and has two light tabs that could accommodate up to two 9" lights.

Its unique design is capable of mounting a winch with a rated line pull of up to 10,000 lb., with the option of running an aluminum or roller fairlead. Each bumper was developed to be a complete bolt on and requires no modifications to the vehicle. Look for a complete line of XRC Bumpers, Corners, Fenders and Rockers to be developed and launching soon.

Year	Finish	Part#	Jobber
97-06 Jeep Wrangler	Black Textured	76800	\$519.99
